

Original (High Sampling)

Low Sampling

High Intensity (256 Levels)

Low Intensity (16 Levels)

===== IMAGE ANALYSIS =====

Original Resolution : (520, 937)

Low Sampling Resolution : (520, 937)

Intensity Resolution (Original): 256 Gray Levels

Intensity Resolution (Reduced): 16 Gray Levels

Observation:

- High sampling preserves fine edges and textures.
- Low sampling removes small image details.
- High intensity resolution preserves smooth intensity variations.
- Low intensity resolution causes loss of subtle image information.
- For fine-detail detection, choose high sampling and high intensity resolution.
